

CIVIL SELF STUDY

- ✚ The Program file which is created allows us to find the resultant of coplanar concurrent and non-concurrent force system.

○ Note: If executing the program in turbo c then we need to change iostream to iostream.h and remove "*using namespace std;*" line.

Source Code:

```
#include <iostream>
#include<math.h>
#include<stdlib.h>
using namespace std;
void intro();
void concurrent();
void nconcurrent();
void instructions();

void instructions()
{
    system("cls");
    cout<<" NOTE::\n\n 1. If the force is along (+)ve x-axis enter
the value of angle as 0.\n 2. If the force is along (+)ve y-axis
enter the value of angle as 90.\n 3. If the force is along (-)ve x-
axis enter the value of angle as 180.\n 4. If the force is along (-
)ve y-axis enter the value of angle as 270.\n 5. Enter angle in
degrees.";
    cout<<"\n\nEnter the force and its angle with x-axis in a
format given below:\n 32 60\n 50 90\n\n\n ";
}
```

```

!!VERY WARM WELCOME !!

This is a program for solving the problems related to coplanar force system and non coplanar force system

CHOOSE THE FORCE SYSTEM:
1. Concurrent Force System
2. Non-Concurrent Force System
3. Quit

Press 1 for 1st option, 2 for 2nd option and 3 for exiting the program:[]
```

```
File Edit Selection View Go Run Terminal Help
Untitled-1.cpp - Visual Studio Code
OUTPUT TERMINAL DEBUG CONSOLE PROBLEMS
No results.
NOTE:::
1. If the force is along (+)ve x-axis enter the value of angle as 0.
2. If the force is along (+)ve y-axis enter the value of angle as 90.
3. If the force is along (-)ve x-axis enter the value of angle as 180.
4. If the force is along (-)ve y-axis enter the value of angle as 270.
5. Enter angle in degrees.
6. First Enter the distance from y-axis then from x-axis.
7. Input should be in the format: Force Angle Distance_from_y-axis Distance_from_x-axis
8. If the force is passing through the lowermost left point, enter it's distance as 0

Enter the force, its angle with x-axis, Distance from y-axis and x- axis and in a format given below:
32 60 3 4
50 90 1 2

Enter all the values in the format specified

100 180 0 0
200 90 2 4
100 0 4 4
141.32 315 4 0
```

The central window displays a technical diagram labeled 'Fig. 2.35' showing a 2D coordinate system with a force vector F acting at a point. The diagram includes dimensions for the force's position relative to the axes. Below the diagram, the following calculations are shown:

Question: For the non-concurrent coplanar system shown in Fig. 2.35 determine the magnitude, direction and position of resultant force with reference to 'A'.

Solution: $F_x = 127 \times \cos 60^\circ = 100 \times \cos 60^\circ = 100 \text{ N}$
 $F_y = 127 \times \sin 60^\circ = 100 \times \sin 60^\circ = 100 \text{ N}$
 $R = \sqrt{F_x^2 + F_y^2} = \sqrt{100^2 + 100^2} = 141.42 \text{ N}$
 $\theta = \tan^{-1} \left(\frac{F_y}{F_x} \right) = \tan^{-1} \left(\frac{100}{100} \right) = 45^\circ$

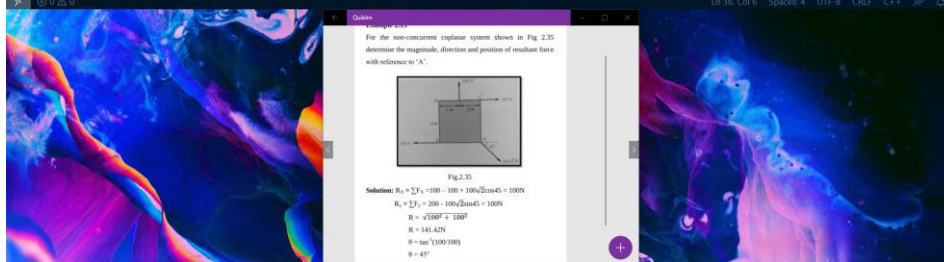

```

Check The Values Before Submitting:

F1 = 100 , angle1 = 180 degrees , x1 = 0 and y1 = 0
F2 = 200 , angle2 = 90 degrees , x2 = 2 and y2 = 4
F3 = 100 , angle3 = 0 degrees , x3 = 4 and y3 = 4
F4 = 141.32 , angle4 = 315 degrees , x4 = 4 and y4 = 0

1. SUBMIT 2. RE-ENTER VALUES
Enter your choice:

```

For the non-concurrent coplanar system shown in Fig. 2.35 determine the magnitude, direction and position of resultant force with reference to 'A'.

Fig. 2.35

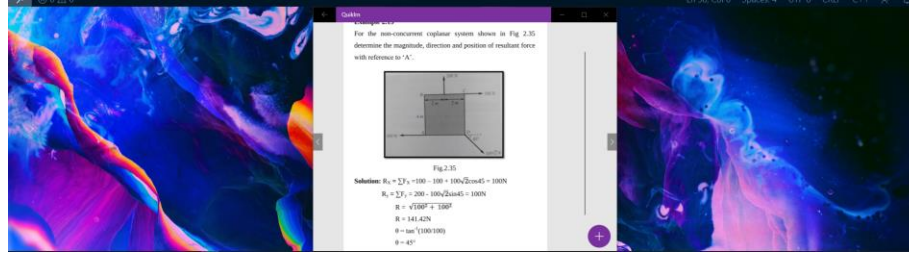

Solution: $R_x = \sum F_x = 100 - 100 + 100\sqrt{2}\cos 45^\circ = 100\text{N}$
 $R_y = \sum F_y = 200 - 100\sqrt{2}\sin 45^\circ = 100\text{N}$
 $R = \sqrt{100^2 + 100^2}$
 $R = 141.42\text{N}$
 $\theta = \tan^{-1}(100/100)$
 $\theta = 45^\circ$

```

2: Code

+

Fx = 99.9283

Fy = 100.072

Resultant = 141.421

Angle = 45.0411 degrees

Moment = -399.713

Distance of Resultant from point A = -2.8264

X-Intercept = -3.99427

Y-Intercept = -4

Enter M to go to the main menu:[]

Ln 38, Col 6 Spaces: 4 UTF-8 CRLF C++

Quinn

$$(200)(2) - (100)(4) - (100\sqrt{2} \sin 45)(4) = (141.42)(d)$$
$$d = -2.828m$$

As the perpendicular distance is negative, the resultant produces clockwise moment about A. The position of resultant with respect to A is shown in Fig 2.36

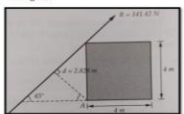

Fig 2.36

Note the X-intercept will be $\frac{2.828}{\sin 45} = 4m$ to the left of A and Y-intercept is also 4m above A.

Example 2.16

A rigid plate is subjected to the forces as shown in Fig 2.37,
